

CV for SCESM 2018

Dr.-Ing. Michael Haist

Dr. Michael Haist is a senior researcher at the Institute of Concrete Structures and Building Materials of Karlsruhe Institute of Technology. His major research field of interest is the investigation of the deformation behavior of fresh and hardened concrete and the development of new types of concretes, such as lightweight thermal insulation concretes, self-compacting concretes, ultra-high-performance concretes and especially ecological concretes. Together with Prof. Harald S. Müller he proposed new approaches, how to quantify the sustainability potential of building materials such as concrete.

Dr. Michael Haist is the author of more than 100 publications and editor of two conference proceedings.
